Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the claimed combination of the method for producing a liquid discharge head is not found in the prior art.

For example, the inclusion of the claimed combination in the independent claims is the primary reasons for allowance: "forming in said organic resin, a second flow path pattern of a similar height than in said second bubble generating chamber simultaneously with a pattern of said second bubble generating chamber, by employing a locally different exposure amount;

Laminating a negative-working organic resin layer on said thermally cross-linked film and said patterned organic resin and forming said discharge port portion in said negative-working organic resin layer; and removing said thermally cross-linked film and said patterned organic resin, wherein the pattern of the second flow path having a lower height than in said second bubble generating chamber is formed by an exposure of said organic resin employing a slit mask having slit pitch and then developing said organic resin.

The claims have been cross-referenced with the claims in application serial no. 10/613992 for double patenting issues. The claims appear to have distinct subject matter and are deemed not to be subject to double patenting statutes.

The examiner has conducted an exhaustive search which has resulted in the finding of no art to disprove novelty and nonobviousness.

The independent claims are deemed to be allowed. The dependent claims are allowed since they depend from allowed base claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
